

THE CONCEPT

Small incision, fluoroscopy-guided allograft placement to stabilize joint

THE DESIGN

Single use, pre-sterilized kit shipped separately from allografts

THE PROCEDURE

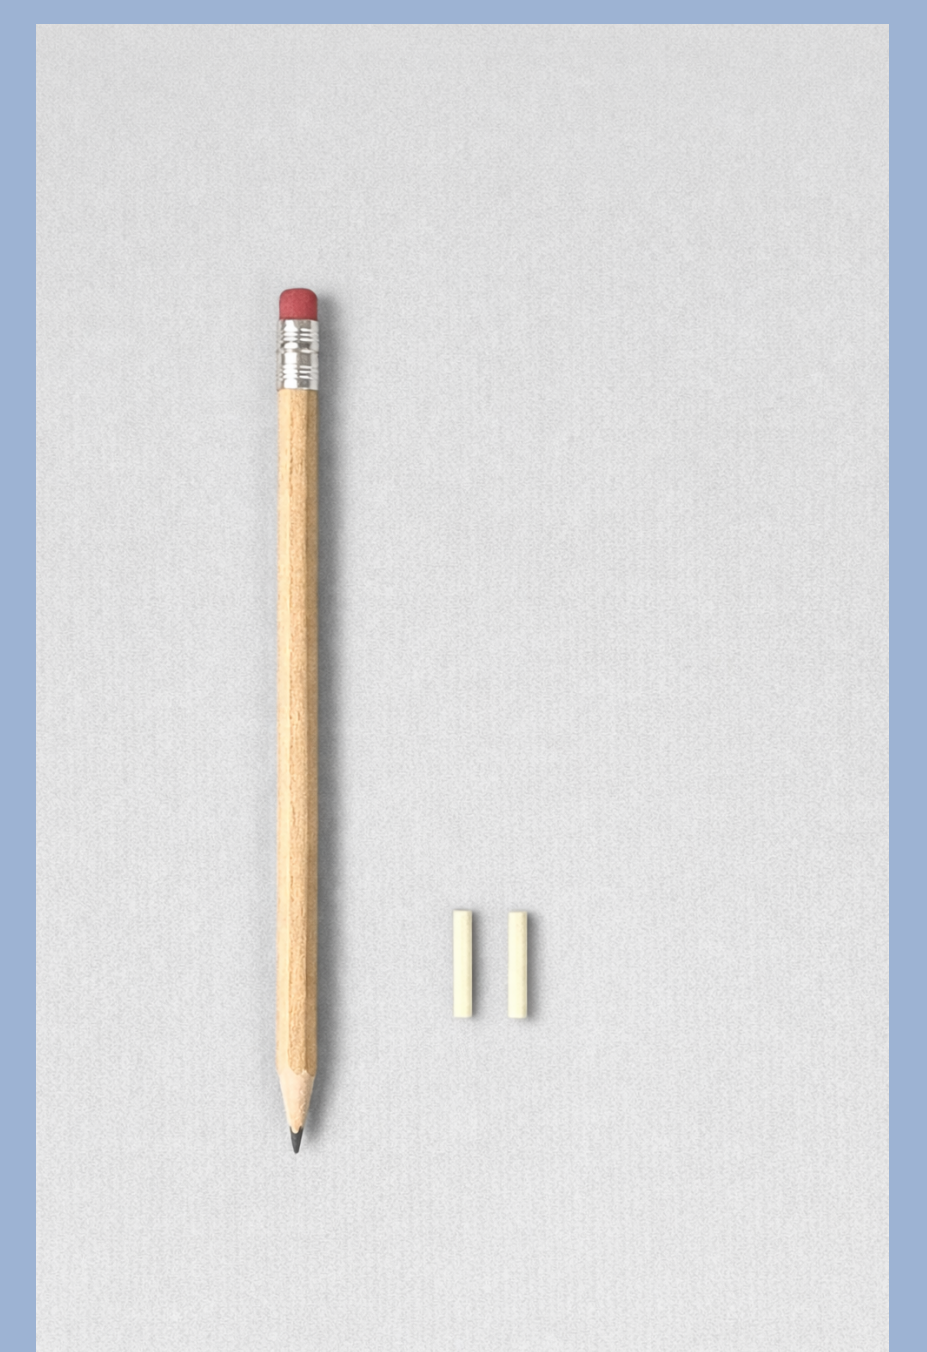

Typically 30 minutes and often performed with sedation

THE RECOVERY

Immediate ambulation, return to activity as tolerated

The SacroLoX Advantage vs. Lateral

- Limited blood loss & neuromuscular risk
- Avoids large muscle dissection
- Reduced post-op pain and activity limitations
- Decreased implant related hardware complications
- Joint preservation for future alternative therapies or treatments

IMPORTANT INFORMATION

This pamphlet is for educational purposes only and is not medical advice. Only qualified clinicians can diagnose and recommend treatment. Outcomes vary. Follow all instructions and refer to the product Instructions for Use (IFU).
